

SUMMARY

Cybersecurity and Digital Forensics graduate with hands-on experience in Python, network security, Security Operations (SOC), SIEM deployment, and digital forensics. Experienced in developing Python-based security solutions, deploying Wazuh SIEM environments, analyzing Windows event logs, investigating security incidents, and working with BLE communication systems. Skilled in log analysis, network traffic analysis, and security monitoring through academic projects and industry internships.

EDUCATION

MIT World Peace University*B.Tech, CSE Cyber Security & Forensics — CGPA: 7.58*

2023 – 2026

Pune, India

Uka Tarsadia University*Diploma in Computer Engineering — CGPA: 8.75*

2020 – 2023

Gujarat, India

TECHNICAL SKILLS

Digital Forensics: Cellebrite UFED, Magnet AXIOM, EnCase, MSAB XRY, FTK Imager, Atola Insight Forensics, MTKClient, ADB

SIEM & Security Monitoring: Wazuh, ELK Stack

Security Testing: Burp Suite, Wireshark, Nmap, Nessus, OpenVAS, Metasploit

Programming: Python, Bash, SQL, JavaScript

Frameworks & Libraries: Flask, Pandas, Regex, Scapy, pynput, OpenCV.

Databases: SQLite, MariaDB

Infrastructure & Platforms: Docker, OrbStack, Git, GitHub

Operating Systems: Windows, Linux, macOS

Frameworks & Standards: MITRE ATT&CK, OWASP Top 10

Networking: TCP/IP, DNS, DHCP, HTTP/HTTPS, BLE, Network Traffic Analysis, Packet Analysis

EXPERIENCE

Regional Forensic Science Laboratory (COE)*Scientific Assistant Intern*

Jul 2025 – Jan 2026

Pune, India

- Assisted in acquisition, preservation, and forensic analysis of digital evidence from multiple devices.
- Performed artifact extraction, log review, and incident timeline reconstruction during forensic investigations.
- Maintained investigation documentation, evidence handling records, and proper chain-of-custody procedures.
- Contributed to artifact correlation and forensic reporting during cybersecurity and digital evidence examinations.

Shalaka Connected Devices Systems Pvt. Ltd.*IoT Intern*

Apr 2024 – Nov 2024

Pune, India

- Developed and tested BLE-based communication workflows using Python to exchange data between connected devices and a simulated server.
- Built and validated a dummy BLE server for testing device communication and data transmission.
- Worked on BLE-based monitoring dashboards for device tracking and visualization.
- Collaborated with teams to troubleshoot BLE communication and device connectivity issues.

PRASUNET Pvt. Ltd.*Cyber Security Intern*

Aug 2024 – Sep 2024

Remote

- Implemented classical encryption techniques including Caesar Cipher to understand fundamental cryptographic concepts.
- Developed an image encryption application using pixel manipulation techniques in Python.
- Built a password complexity checker using regular expressions to validate password strength against defined security policies.
- Created a basic Python keylogger for educational purposes to understand keyboard event monitoring.
- Developed a network packet analyzer using Scapy to capture and inspect network traffic.

Atul Ltd.*Database Administrator Intern*

May 2022 – Jun 2022

Valsad, India

- Assisted with SQL backup management and database monitoring tasks.
- Reviewed query logs and supported access control management.
- Helped optimize database operations and maintain system reliability.

PROJECTS

DDVM: Purple Team Lab | Docker, Elastic Stack, Linux | GitHub

- Built a containerized Purple Team lab environment with intentionally vulnerable systems for adversarial simulation and Red Team exercises.
- Performed reconnaissance, attack simulation, threat hunting, and detection validation across Linux-based environments.
- Integrated Elastic Stack (Elasticsearch, Kibana, Filebeat) for centralized log collection, attack visibility, and security monitoring workflows.
- Simulated offensive security scenarios to validate log collection, attack visibility, and query-based detection rules within the SIEM.
- Developed deployment scripts for reproducible cybersecurity lab environments across Linux and Windows systems.

SentinelSOC: Security Monitoring and Analysis Platform | Python, Flask, SQLite, Pandas, FPDF, Regex | GitHub

- Engineered a full-stack SOC simulator featuring a real-time ingestion pipeline that normalizes heterogeneous logs from Linux (auth.log), Windows Event Logs, and Web (Nginx/Apache) sources.

- Developed a multi-layered SIEM detection engine implementing Regex-based threat detection, Threshold-based brute-force detection, and Unique Count-based port scan identification.
- Implemented context-awareness using SQLite-based historical baselines to automatically escalate alert severity for persistent attacking IP addresses.
- Simulated SOC ticket lifecycle management, SIEM alert triage, incident escalation workflows, and analyst investigation procedures within a SOC environment.
- Implemented IP whitelisting, log correlation, and metadata enrichment to filter benign traffic and track incident sources during simulated investigations.
- Built an interactive Flask dashboard for security monitoring, incident triage, analyst-driven active-response IP blocking, and PDF/Excel report generation.
- Aligned detection rules for web injection, authentication brute-force, and port reconnaissance with MITRE ATT&CK techniques to enhance alert categorization.

Wazuh SIEM Deployment & Security Monitoring Lab | *Wazuh, Docker, OrbStack, Windows 11, Nmap*

- Deployed a Wazuh SIEM environment on macOS using Docker containers managed through OrbStack.
- Configured and enrolled a Windows 11 endpoint using the Wazuh Agent for centralized security event collection.
- Validated Windows authentication monitoring by generating failed logon events (Event ID 4625 / Wazuh Rule ID 60122) and analyzing alerts through the Wazuh Dashboard.
- Performed threat hunting by analyzing endpoint telemetry and security events using the Wazuh Threat Hunting module.
- Conducted Nmap reconnaissance testing and documented the limitations of default host-based monitoring for detecting network scans.

CERTIFICATIONS & ACHIEVEMENTS

- Google Cybersecurity Professional Certificate
- Digital Forensics & Incident Response (CyCube)
- Indian Copyright Registration – STEGOCRYPT USING QR CODE
